

HEAT

Saver Pipe

Insulated Water Pipe for Outdoor Wood Stoves & Furnaces

With low cost Heat Saver Pipe you can put additional
PROFIT into your next project!

- **Preamsembled** - Unroll and connect the ends. It's that easy!
- **Flexible** - No corners to buy; no corners to struggle
- **Cut-to-Length** - No leftover pieces; no waste!
- **Winter Sales** - Very little heat loss when laid on frozen ground for late season installs.
- **Affordable** - Due to inexpensive pipe, now the furnace can be placed where the fuel source is.
- **Efficient** - One stove can be used to heat two houses, lengths of 250' without any splices!
- **Saves Money** - Only buy what you need!

This completely pre assembled pipe includes:
2 - 1" pex-al-pex supply / return lines wrapped twice in closed cell foil-faced aluminum insulation. This Heat Saver Pipe comes wrapped end to end inside a 4" flexible drain tile, and then coiled on a pallet for efficient transporting!

A Few Measuring Tips:

- Include the measurement from the house inlet to the bottom of the trench.
- Include the measurement from the stove connections to the bottom of the trench.
- Allow enough length inside for easy splicing.
- Consider adding additional footage for an uneven trench, avoiding tree roots, rocks, etc.
- For stove cement pad installs: if possible, install Heat Saver insulated pipe first, then add the cement pad. This ensures the correct length for the water lines.
